次の文を読み、間に答えなさい。

There is nothing new about people cutting down trees. In ancient times, Greece, Italy, and Great Britain were covered with forests. Over the centuries, those forests were gradually cut back, until now almost nothing is ( 1 ).

Today, however, trees are being cut down far more rapidly. Each year, about 42 million acres of forest are cut down. That is more than equal to the area of the whole of Great Britain. ( 3 ) there are important reasons for cutting down trees, there are also dangerous consequences for Me on earth.

A major ( 4 ) of the present destruction is the worldwide demand for wood. In industrialized countries, people are using more and more wood for paper, furniture, and houses. There is not enough wood in these countries to (5)satisfy the demand. Wood companies, therefore, ( 6 ) wood from the forests of Asia, Africa, South America, and even Siberia.

Wood is also in great demand as firewood in (7)\_\_\_\_\_ countries. In many areas, people depend on wood to cook their food. As the population grows, the need for wood grows, too. But when too many trees are cut at once, forests are destroyed. A future source of wood is destroyed as well. When some trees in a forest are left standing, the forest can grow back. But only if it is not cut again for at least 100 years. In reality, it usually has no chance to grow back. Small farmers who are desperate for land move in. They cut down the rest of the trees and burn them. In this way, many millions of acres of forest are destroyed every year. Unfortunately, the forest soil is not good for growing food. Thus, these poor farmers remain as poor and desperate as before. They have also lost the resources of the forest.

However, the desperate and poor people are not the only ones to cut and burn forests. In Brazil and Central America, large landowners want to (8)raise lots of cattle for export. They put too many cattle on too little land. When that land has been ruined, they burn parts of the forests. Then they move the cattle into the forest land. This way both land and forest are destroyed.

The destruction of forests affects first the people who used to live there. However, it also has other effects far away. For example, on the mountainsides, trees ( 9 ). When the trees are cut down, the rain pours all at once into the rivers and there are terrible floods downstream. This has happened to the Ganges, the Mekong, and other major rivers in Asia.

But finally, the loss of forests may have an effect on the climate of our planet. Together with increasing pollution, it could cause (10) temperatures to rise and the climate to change around the world. No one knows exactly what effects this would have ( 11 ) our lives. For many people, however, the effects would probably be (12)destructive.
